

Postdoctoral position, Team Plateroti

A postdoctoral position is open for a motivated candidate to join the team Development, cancer and stem cells. The selected applicant will be funded for one year, renewable for an additional year.

The postdoc will participate to the study of the mechanisms at the basis of the gut stem biology and of their transformation leading to cancer. To reach our goals we use mouse models, 3D culture systems and cell/molecular biology approaches.

The successful candidate must have, or be expecting, a Ph.D. in molecular/cell/development biology or a related topic. Mouse handling skill is required.
